Adelong stud Poll Dorset ewes

2022 Poll Dorset stud ram lambs

Adelong sale ram hoggets

Adelong rams off to Gisborne

Adelong 214-21 Winner of the objective measurement class at Canterbury Show 2022. Retained and used in this years mating.

FOREWORD

Dianne and I have pleasure in presenting our rams for our 19th annual on farm sale.

The Poll Dorset flock was established in 1970 and since that time we have strived to breed sheep that are tough, structurally sound, true to breed type, with good constitution and performance figures (growth, muscle, fat and fertility) giving them the ability to shift and thrive wherever they are used, in New Zealand and around the world.

We continue to use DNA testing to identify sires with good foot scores. After identifying some ewes with 1-1 foot scores and using them for embryo transfer we now have a nucleus of 1-1 ewes in the flock. We have run into a problem with our Foot Score results for this year . although we have taken more samples than usual, as at the time of writing we haven't got any results because the technicians at the Lincoln Laboratory have been or are away on leave, which is very frustrating to say the least. Some guide regarding the Foot Scores of rams can be derived from the list of sires and their Foot Scores. At this stage that is the best we can do. We certainly hope at the very least we will have them to put on the pens on sale day.

The 550 Poll Dorset ewes in the flock are fully recorded with SIL and the rams are muscle scanned by Peter Clulee of Otago Ultra Sound.

All rams in our sale have been veterinary tested, vaccinated, dipped and have a new season Brucella Ovis accreditation.

Lambs were weaned on the 16th, 22nd and 23rd December 2022. The autumn weight and muscle scanning took place on the 4th May 2023

Stud rams

As in the past, stud rams previously sold at the Fielding and Christchurch stud fairs will be auctioned at our on farm sale. They are catalogued from lots 5 to 14 inclusive. They will be paraded on the concrete prior to the sale. Their pedigrees are in the pages prior to lot 1. Stud transfers will be available to any ram purchased over \$2000.

Lot 14 is on account of our Granddaughter Zoe. Zoe has 4 other sires catalogued in lots 45 to 48 inclusive

Acknowledgements

We would like to express our sincere thanks to Callum Dunnett of Hazlett for all his help in selecting our rams for cataloguing and his assistance in organising the sale.

Our thanks to Neville Clark from E J Gordon Livestock for his continuing support.

Arthur Blakely has helped us with overseas business throughout the year, so to Arthur thank you, much appreciated.

Our thanks to Chris Logan from Flock-Linc (SIL Bureau) for his work in loading all the pedigree and performance data and preparing the catalogue for print and also thanks to Chris for helping with pedigree and performance data for the animals for export.

To all outside companies thank you for your support.

Thank you to all companies who have supported our catalogue with your advertisement's our sincere thanks.

As in the past Dianne and I thank you for your support and look forward to catching up with you all at this year's sale.

Neville

REFERENCE SIRES – POLL DORSET

Adelong 133/17 TW	Foot Score 3-3	Cold Tolerance
Adelong 384/18 TW	Foot Score 1-3	Cold Tolerance
Adelong 423/18	Foot Score 3-3	Cold Tolerance
Adelong 454/19	Foot Score 2-3	Cold Tolerance
Adelong 744/19	Foot Score 2-3	Cold Tolerance
Adelong 83/20 TW	Foot Score 1-3	Cold Tolerance AA
Adelong 216/20 TW	Foot Score 1-3	Cold Tolerance AA
Adelong 247/20	Foot Score 1-5	Cold Tolerance AB
Adelong 792/20 Trip	Foot Score 1-3	Cold Tolerance AA

Puketotara 106/18 Trip **Foot Score 1-3** **Cold Tolerance**
Facial Eczema tolerance tested (Slight at 0.25)

Ivadene 0139/17 **Australia**
Shirlee Downs 0408/19 **Australia**

Puketotara 106/18 has been a good outcross for us and we have retained two sons for stud use.

Adelong 384/18 Tw Foot Score 1-3

His Sire, Grandsire and Great Grand Sire have all come through the foot Score family. 384/18 is moderate sized, sound with an excellent carcass who was awarded the Supreme Sheep at the 150th Ellesmere show in 2021.

Adelong 216/20 TW and Adelong 247/20 are both sons of Adelong 384/18.

Adelong 454/19 is by an Ohio sire 33/17 TW. He has left meat and growth and two sons were retained and used in this years mating.

Adelong 744/19 is also by Ohio 33/17 TW

Adelong 792/20 Trip Foot Score 1-3

Adelong 792/20 is a son of 684/17 he is one of the best sires we have bred. Moderate, easy doing, sound and has left progeny with very good production figures for meat and growth.

Adelong 83/20 is a Puketotara son he is very sound of moderate size and is breeding well.

As part of our DNA testing for foot Score we have also tested for cold Tolerance

Suffolk x Texel x Poll Dorset

As in the past we have used two very good Suffolk rams over what we have selected as the best Texel x Poll Dorset ewes.

The Suffolk rams were bred by Eric Ross from his Collie Hills stud.

They are very sound tough rams with excellent carcasses.

TERMS AND CONDITIONS

The New Zealand Stock & Station Agent's Association Conditions of Sale and, to the extent deemed relevant by HAZLETT Limited, HAZLETT Terms of Sale apply to this sale. When proceeds are credited or a purchase is debited to a HAZLETT monthly credit account, then HAZLETT'S Monthly Account Terms of Trade (as amended from time to time) apply to the extent deemed relevant by HAZLETT. These terms can be inspected at the registration desk and on the wall in the auction room. The current versions of HAZLETT'S Terms of Sale and Monthly Account Terms of Trade are also available online at:

www.hazlett.nz

All intending purchasers must register at the sales office prior to the sale.

HAZLETT will pay a purchasing rebate of 6% of the purchase price excluding GST, plus GST, to livestock companies & recognised independent livestock agents with a HAZLETT account who have introduced buyers to HAZLETT before the sale and/or accompanied buyers to the sale.

PLEASE BRING THIS CATALOGUE TO THE SALE

EXPLAINING SIL AND SHEEP SELECTION TOOLS

The SIL NZ Standard Terminal Worth Index (NZTW) focuses on key economic factors that influence farm income and costs – growth, survival and meat (carcass quality). SIL NZTW expresses (in cents per ewe lambing) differences in overall genetic merit between rams which are used in a prime lamb production system in which all progeny are slaughtered.

For example, if rams A and B from the same flock, with NZTWs of 600 and 700 respectively are mated to genetically similar ewes, ram B would be expected to produce progeny that on average return 50 cents ($700 - 600 / 2 = 50$) more than ram A per ewe mated. Assuming the two rams were mated to 300 ewes during their lifetime Ram B would be expected to generate \$150 (300×50 cents) more profit than Ram A.

Rankings are based on a combination of sub-indexes TSG (Terminal Sire Lamb Growth) TSM (Terminal Sire Meat yield) TSS (Terminal Sire Survival), which when combined together add up to the NZTW.

Breeding values (BV's) are an estimate of genetic merit for a single trait. They are measured in the units of the trait, e.g. weaning weight BV is measured in kgs. Number of lambs born BV is a measure of proportion of lambs born (proportion $\times 100 = \%$). Breeding values are calculated using information from the individual animal and its relatives, the deviation from the group average and the heritability of the particular trait.

WWT BV	Weaning weight breeding value in kg
NLB BV	Number of lambs born per ewe lambing Value in number of lambs born (proportion $\times 100 = \%$)
LW8 BV	Live weight at 8 months breeding value in Kgs
EMAcBV	Eye muscle area breeding value in square cm – adjusted for carcass weight
LEANYBV	Lean Yield Breeding value in Kgs Lean

Information in relation to the SIL performance data presented in this catalogue

The genetic analysis was run as a New Zealand Single Step Genetic Evaluation Analysis incorporating 1382 flocks. 432 2021 born Rams were reported from this analysis for SIL flock 2905 'Adelong' Neville and Dianne Greenwood.

Using this analysis, the following SIL traits are presented: NZTW, NLBBV, WWTBV, LW8BV, EMAcBV and LEANYBV. Actual measurements for weaning and autumn/spring live weight and ultrasound data are also given.

The data presented in this catalogue was provided with the assistance of FLOCK-LINC an approved SIL bureau.

FOOTROT GENE MARKER TEST

Blood samples collected from sheep can be “typed” to reveal which alleles of the DQA2 gene the sheep has. Sheep have two alleles, reflecting that they inherit one allele from each parent and thus can pass each allele on to their progeny in approximately a 50 : 50 ratio. The “flow” of alleles can thus be followed through extended pedigrees of sheep.

Rather than reveal the exact alleles sheep possess, the alleles have been codified into a ‘1’ (least likely to get footrot) to ‘5’ (most likely to get footrot) scale. The individual alleles are placed on this scale based on the “relative risk” of getting footrot. In our research, sheep with a ‘1’ or ‘2’ score are considered less likely to get footrot than average and sheep with a ‘4’ or ‘5’ score are considered more likely to get footrot than average. Sheep with a ‘3’ score are average (i.e. considered more likely to get footrot than those with a ‘1’ or ‘2’ and less likely to get footrot than those with a ‘4’ or a ‘5’ score).

The graph below shows how the footrot ratings correspond to the relative risk scale, with sheep scoring less than ‘3’ being considered fractionally less likely to get footrot, while those greater than ‘3’ are a number of times more likely to get footrot.

LEAST SUSCEPTIBLE

MOST SUSCEPTIBLE

It is recommended that if reducing footrot incidence is a breeding objective, then culling or corrective mating those animals with scores of 4 or 5 is desirable.

Cold Tolerance Gene-Marker Test

Score A represents an average or above average chance of lambs surviving cold-related causes of mortality; score B represents an average or above average risk of lambs dying from cold-related causes, and score C represents a markedly increased risk of lambs dying from cold-related causes. Lamb survival is one of the key performance indicators for farm productivity; this gene test should be used in conjunction with traits such as ease of lambing, ewe temperament and mothering ability to reduce lamb deaths.

Sheep get two scores for each gene test, reflecting the fact that chromosomes are paired and hence they typically have two copies of any gene. The inheritance of any form of gene (called an allele) can accordingly be followed through pedigrees. Sheep with two copies of the same allele pass one copy of it on to all their progeny, while sheep with one copy (and any other allele) pass this on to 50% of their progeny on average (the other allele is passed to the other 50% of progeny). Gene test results should always be used in conjunction with each stud masters own breeding objectives and not as a replacement for sound animal breeding.
